Insurance Policy Management System Requirements Specification

1. BUSINESS-REQUIREMENT:

1.1 PROBLEM STATEMENT:

Insurance Policy Management Application is .Net Core web API 3.1 application integrated with MS SQL Server, where it involves the systematic administration and handling of insurance policies throughout their lifecycle. This process includes the creation and retrieval of insurance policies, ensuring accurate and secure management of policy-related information.

1.2 FOLLOWING IS THE REQUIREMENT SPECIFICATION:

	Insurance Policy Management
Modules	
1	Insurance Policy
Insurance Policy Module Functionalities	
1	Create an Insurance Policy
2	Fetch all Insurance Policies

2. ASSUMPTIONS, DEPENDENCIES, RISKS / CONSTRAINTS

2.1 Common Constraints

- For all rest endpoints receiving @RequestBody, validation check must be done and must throw custom exception if data is invalid
- All the business validations must be implemented in model classes only.
- All the database operations must be implemented on entity object only
- Do not change, add, remove any existing methods in service layer
- In Repository interfaces, custom methods can be added as per requirements.
- All RestEndpoint methods and Exception Handlers must return data wrapped in **ResponseEntity**

3. BUSINESS VALIDATIONS

Insurance Policy Class Entities

- Policy Id (long) Not null, Key attribute.
- Customer Id (int) Not null.
- Policy Number (string) is not null, min 3 and max 100 characters.
- Premium Amount (decimal) is not null.
- Start Date (Date)
- End Date (Date)
- Policy Type (string) Not null.
- Is Active bool

4. CONSIDERATIONS

- There is no roles in this application
- You can perform the following 3 possible actions

Insurance Policy

5. REST ENDPOINTS

Rest End-points to be exposed in the controller along with method details for the same to be created

5.1 InsurancePolicyController

URL Exposed		Purpose
/create-policy		Create Insurance Policy
Http Method	POST	
Parameter 1	InsurancePolicy model	
Return	HTTP Response StatusCode	
/get-all-policies		Fetches the list of all Insurance Policies
Http Method	GET	
Parameter 1	-	
Return	<IEnumerable<Political Party>>	

6. TEMPLATE CODE STRUCTURE

6.1 Package: InsurancePolicyManagement

Resources

Names	Resource	Remarks	Status
Package Structure			
Controller	InsurancePolicyController	Controller class to expose all rest-endpoints for auction related activities.	Partially implemented
Startup.cs	Startup CS file	Contain all Services settings and SQL server Configuration.	Already Implemented
Properties	launchSettings.json file	All URL Setting for API	Already Implemented
	appsettings.json	Contain connection string for database	Already Implemented

6.2 Package: InsurancePolicyManagement.BusinessLayer

Resources

Names	Resource	Remarks	Status
Package Structure			
Interface	IInsurancePolicyServices interface	Inside all these interface files contains all business validation logic functions.	Already implemented
Service	InsurancePolicy Services CS file	Using this all class we are calling the Repository method and use it in the program and on the controller.	Partially implemented
Repository	IInsurancePolicy Repository InsurancePolicy Repository (CS files and interfaces)	All these interfaces and class files contain all CRUD operation code for the database. Need to provide implementation for service related functionalities	Partially implemented
ViewModels	InsurancePolicy ViewModel	Contain all view Domain entities for show and bind data. All the business validations must be implemented.	Partially implemented

6.3 Package: InsurancePolicyManagement.DataLayer

Resources

Names	Resource	Remarks	Status
Package Structure			
DataLayer	InsuranceDBContext cs file	All database Connection, collection setting class	Already Implemented

6.4 Package: InsurancePolicyManagement.Entities

Resources

Names	Resource	Remarks	Status
Package Structure			
Entities	InsurancePolicy ,Response (CS files)	<p>All Entities/Domain attribute are used for pass the data in controller and status entity to return response</p> <p>Annotate this class with proper annotation to declare it as an entity class with Id as primary key.</p> <p>Generate the Id using the IDENTITY strategy</p>	Partially implemented

FRONTEND-ANGULAR SPA

1. PROBLEM STATEMENT

Insurance Policy Application is SPA (Single Page Application), it allows you to add policy details and get all policies.

2. PROPOSED INSURANCE POLICY APPLICATION WIREFRAME

UI needs improvisation and modification as per given use case and to make test cases passed.

2.1 HOME PAGE

A browser window showing the 'Insurance Policy Management' application. The page has a title 'Insurance Policies' and a 'Refresh Policies' button. Below is the 'Add Policy' section with form fields for Policy Number, Policy Type, Premium Amount, Start Date, End Date, Is Active, and Customer ID, followed by an 'Add Policy' button.

localhost:4200/

Insurance Policy Management

Insurance Policies

Refresh Policies

Add Policy

Policy Number: Policy Type: Premium Amount:

Start Date: End Date: Is Active: ☐ Customer ID:

The same browser window as above, but with sample data entered into the form fields: Policy Number 1234, Policy Type Mutual Fund, Premium Amount 10000, Start Date 11/01/2023, End Date 11/01/2024, Is Active checked, and Customer ID 100.

localhost:4200/

Start Date:

mm/dd/yyyy

End Date:

mm/dd/yyyy

Is Active:

☐

Customer ID:

0

Add Policy

3. BUSINESS-REQUIREMENT:

As an application developer, develop the Insurance Policy Management (Single Page App) with below guidelines:

User Story #	User Story Name	User Story
US_01	Home Page	As a user I should be able to visit the Home page as the default page.
US_01	Home Page	<p>As a user I should be able to see the homepage and perform all operations:</p> <p>Acceptance criteria:</p> <ol style="list-style-type: none">1. Add "Insurance Policies" as heading in h2.2. Should have a "Refresh Policies" button.3. Should show a list of all policies.4. As a user I should be able to furnish the following details at the time of creating a policy.<ol style="list-style-type: none">1.1 Policy Number1.2 Policy Type1.3 Premium Amount1.4 Start Date1.5 End Date1.6 Is Active1.7 Customer ID5. All fields should be required fields to add a policy.

4. EXECUTION STEPS TO FOLLOW FOR BACKEND

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers need to go to the Application menu (Three horizontal lines at left top) Terminal → New Terminal.
3. On command prompt, cd into your project folder (**cd <Your-Project-folder>**).
4. To connect SQL server from terminal:
(InsurancePolicyManagement /**sqlcmd -S localhost -U sa -P pass@word1**)
 - To create database from terminal -
 - 1> Create Database InsuranceDb**
 - 2> Go**
5. Steps to Apply Migration(Code first approach):
 - Press **Ctrl+C** to get back to command prompt
 - Run following command to apply migration-
(InsurancePolicyManagement /**dotnet-ef database update**)
6. To check whether migrations are applied from terminal:
(InsurancePolicyManagement /**sqlcmd -S localhost -U sa -P pass@word1**)
 - 1> Use InsuranceDb**
 - 2> Go**
 - 1> Select * From __EFMigrationsHistory**
 - 2> Go**
7. To build your project use command:
(InsurancePolicyManagement /**dotnet build**)
8. To launch your application, Run the following command to run the application:
(InsurancePolicyManagement /**dotnet run**)
9. This editor Auto Saves the code.

10. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.

11. To test web-based applications on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

Note: The application will not run in the local browser

12. To run the test cases in CMD, Run the following command to test the application:
(InsurancePolicyManagement .Tests/**dotnet test --logger "console;verbosity=detailed"**)
(You can run this command multiple times to identify the test case status, and refactor code to make maximum test cases passed before final submission)

13. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B - command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.

14. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.

15. You need to use CTRL+Shift+B - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.

5. EXECUTION STEPS TO FOLLOW FOR FRONTEND

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
 2. To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal ->New Terminal.
 3. This is a web-based application, to run the application on a browser, use the internal browser in the environment.
 4. You can follow series of command to setup Angular environment once you are in your project-name folder:
 - a. npm install -> Will install all dependencies -> takes 10 to 15 min
 - b. npm run start -> To compile and deploy the project in browser. You can press <Ctrl> key while clicking on localhost:4200 to open project in browser -> takes 2 to 3 min
 - c. npm run test -> to run all test cases. **It is mandatory to run this command before submission of workspace -> takes 5 to 6 min**
 5. You need to use **CTRL+Shift+B** - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
-
